

What we know:

EPA ID: TXD008029373

Address: 3209 Galvez Ave, Fort Worth, TX 76111

Hazardous waste manifest calculations

2017 BR: 3234 kg (Find on excel spreadsheet)

2019:

11/13/19: 3131.25 kg corrosive hydrofluoric acid

11/8/19: 208 kg corrosive hydrofluoric acid/PPE Debris

11/6/19: 4175 kg corrosive hydrofluoric acid

RCRA INFO: Registering as Very Small Quantity Generator last notification was in 2018

Location: PVI's corporate headquarters and manufacturing facility are located in Fort Worth, Texas.

About: PVI is the only ASME-code water heater manufacturer who builds pressure vessels and heat exchangers from duplex stainless steel, **AquaPLEX®**. Aiding in the proper fabrication of these vessels is our in-house pickle/passivation process. Once finished, the tanks are naturally immune to corrosion in hot potable water and require no supplemental tank linings or anode protection systems giving our water heaters superior reliability and product longevity.

Reason for category 3: PVI is shipping out LQG amounts of the same waste on 11/13/19 and 11/6/19 manifests (7306 total) and you can also see the generation of the waste according to their manifests dates. There is a potential for storage (TSD) violations as well.
